

# Pinewski Builders

## **"What would I do personally if this was my house"**

Here is what sets this builder apart from the rest.

1- Pinewski Builders uses spray polyurethane foam for insulation in all projects. This is by far one of the best practices in the industry, because of the insulation r-value and how it fills in all areas tight unlike fiberglass. Also from the sound proofing properties to the building strength. It is like gluing all the components all together. One of the most important things is lack of moisture in the wall cavity. The dew point happens in the center of the foam not allowing moisture to be a concern.

2- Hardie board siding. This too is your best exterior product from a maintenance issue. This product won't rot, doesn't burn, bugs don't like it, it won't blow off, and hail doesn't hurt it. Paint stays on 3-4 times longer then any other product plus it looks great!!

3- Marvin Integrity Windows are the window of choice for several reasons. A local made product that they stand behind, great price point, delivery turn around(10 days), looks, the fiberglass composite doesn't move as much as Vinyl or aluminum.

The approach they use for all of our projects is the attitude of **"What would I do personally if this was my house"** There are problems in every project so they are addressed with this thought in mind.

Another thing I do with ever project is to clean them thoroughly at key stages of the construction process to delivery a quality project.
